

SYNOPSIS

WHAT are the fundamental motives that explain the present rivalry of armaments in Europe, notably the Anglo-German? Each nation pleads the need for defence; but this implies that someone is likely to attack, and has therefore a presumed interest in so doing. What are the motives which each State thus fears its neighbors may obey?

They are based on the universal assumption that a nation, in order to find outlets for expanding population and increasing industry, or simply to ensure the best conditions possible for its people, is necessarily pushed to territorial expansion and the exercise of political force against others (German naval competition is assumed to be the expression of the growing need of an expanding population for a larger place in the world, a need which will find a realization in the conquest of English Colonies or trade, unless these are defended); it is assumed, therefore, that a nation's relative prosperity is broadly determined by its political power; that nations being competing units, advantage, in the last resort, goes to the possessor of preponderant military force, the weaker going to the wall, as in the other forms of the struggle for life.

The author challenges this whole doctrine. He

attempts to show that it belongs to a stage of development out of which we have passed; that the commerce and industry of a people no longer depend upon the expansion of its political frontiers; that a nation's political and economic frontiers do not now necessarily coincide; that military power is socially and economically futile, and can have no relation to the prosperity of the people exercising it; that it is impossible for one nation to seize by force the wealth or trade of another—to enrich itself by subjugating, or imposing its will by force on another; that, in short, war, even when victorious, can no longer achieve those aims for which peoples strive.

He establishes this apparent paradox, in so far as the economic problem is concerned, by showing that wealth in the economically civilized world is founded upon credit and commercial contract (these being the outgrowth of an economic interdependence due to the increasing division of labor and greatly developed communication). If credit and commercial contract are tampered with in an attempt at confiscation, the credit-dependent wealth is undermined, and its collapse involves that of the conqueror; so that if conquest is not to be self-injurious it must respect the enemy's property, in which case it becomes economically futile. Thus the wealth of conquered territory remains in the hands of the population of such territory. When Germany annexed Alsatia, no individual German secured a single mark's worth of Alsatian property as the spoils of war. Conquest in the modern world is a process of multiplying by

x , and then obtaining the original figure by dividing by x . For a modern nation to add to its territory no more adds to the wealth of the people of such nation than it would add to the wealth of Londoners if the City of London were to annex the county of Hertford.

The author also shows that international finance has become so interdependent and so interwoven with trade and industry that the intangibility of an enemy's property extends to his trade. It results that political and military power can in reality do nothing for trade; the individual merchants and manufacturers of small nations, exercising no such power, compete successfully with those of the great. Swiss and Belgian merchants drive English from the British Colonial market; Norway has, relatively to population, a greater mercantile marine than Great Britain; the public credit (as a rough-and-ready indication, among others, of security and wealth) of small States possessing no political power often stands higher than that of the Great Powers of Europe, Belgian Three per Cents. standing at 96, and German at 82; Norwegian Three and a Half per Cents. at 102, and Russian Three and a Half per Cents. at 81.

The forces which have brought about the economic futility of military power have also rendered it futile as a means of enforcing a nation's moral ideals or imposing social institutions upon a conquered people. Germany could not turn Canada or Australia into German colonies—i. e., stamp out

their language, law, literature, traditions, etc.—by “capturing” them. The necessary security in their material possessions enjoyed by the inhabitants of such conquered provinces, quick inter-communication by a cheap press, widely-read literature, enable even small communities to become articulate and effectively to defend their special social or moral possessions, even when military conquest has been complete. The fight for ideals can no longer take the form of fight between nations, because the lines of division on moral questions are within the nations themselves and intersect the political frontiers. There is no modern State which is completely Catholic or Protestant, or liberal or autocratic, or aristocratic or democratic, or socialist or individualist; the moral and spiritual struggles of the modern world go on between citizens of the same State in unconscious intellectual co-operation with corresponding groups in other States, not between the public powers of rival States.

This classification by strata involves necessarily a redirection of human pugnacity, based rather on the rivalry of classes and interests than on State divisions. War has no longer the justification that it makes for the survival of the fittest; it involves the survival of the less fit. The idea that the struggle between nations is a part of the evolutionary law of man's advance involves a profound misreading of the biological analogy.

The warlike nations do not inherit the earth; they represent the decaying human element. The di-

minishing rôle of physical force in all spheres of human activity carries with it profound psychological modifications.

These tendencies, mainly the outcome of purely modern conditions (*e. g.* rapidity of communication), have rendered the problems of modern international politics profoundly and essentially different from the ancient; yet our ideas are still dominated by the principles and axioms, images and terminology of the bygone days.

The author urges that these little-recognized facts may be utilized for the solution of the armament difficulty on at present untried lines—by such modification of opinion in Europe that much of the present motive to aggression will cease to be operative, and by thus diminishing the risk of attack, diminishing to the same extent the need for defence. He shows how such a political reformation is within the scope of practical politics, and the methods which should be employed to bring it about.
